DETAILED DIGITAL PRESENCE & SEO AUDIT REPORT

West Coast Physical Therapy Lab

Website · Google Business Profile · Local SEO · Social · AI Search · Conversion

5630 District Blvd #105, Bakersfield, CA 93313, United States

AUDITED BY

Md. Abdul Alim

Local SEO & AI Search Optimization Consultant

Audit Date

July 30, 2026

Audit Overview

This report presents a comprehensive review of West Coast Physical Therapy Lab's digital presence across six core areas: website SEO, Google Business Profile, local SEO, social media, AI search readiness, and website conversion. Each category is scored out of 10, with supporting rationale and prioritized recommendations.

Website SEO Audit

Evaluation of technical SEO, on-page optimization, and content signals across the website.

Category	Score	Assessment
Website Indexing	9	The site is publicly accessible and appears in search results with no robots.txt or noindex issues (site content is visible on Bing).
HTTPS	10	The site is served entirely over HTTPS, as shown by the secure URL.
Mobile Friendly	8	The Wix site is responsive with clear navigation and readable content on mobile devices (mobile preview looks complete).
Page Speed	4	The homepage has many large images and scripts (Wix template), likely causing slow load times, with no speed optimizations visible.
Core Web Vitals	3	Without optimization of images and CSS, the site likely fails key Web Vitals (LCP/CLS), given the many high-resolution media elements.
Technical SEO	4	The site uses Wix infrastructure with limited custom SEO features; no advanced hreflang or sitemap found, and many URLs (images) sit in the Wix "static" folder.
On-Page SEO	3	Content is descriptive but lacks focus on specific local keywords, and the site has minimal meta tagging; main copy reads well but isn't keyword-optimized.
Title Tags	3	There is likely a generic or missing title tag (no custom title seen); for example, "West Coast Physical Therapy Lab" is the site name but not present in visible content.
Meta Descriptions	3	No meta description was found on the homepage or posts (Wix often omits them by default), resulting in poor snippet text control.
Header Structure	7	The page uses clear headings (e.g. "Renew. Strengthen. Empower.") and subheadings for sections, enabling a logical outline of content.
Internal Linking	3	Very few internal links exist – mainly anchor links to sections; no deep internal cross-linking between different pages or blog posts on the site.
Image Optimization	4	Many images are used (Wix "Gemini_Generated" etc.) with automatic compression; large image sizes and missing alt text likely hamper performance.
Content Quality	7	The site and blog have well-written, expert-driven content, including detailed articles by Dr. Anthony Harrell, showing good quality and relevance.

Category	Score	Assessment
Blog Strategy	7	An active blog with recent posts (multiple August 2025 articles) indicates a solid strategy, though posting frequency and promotion could improve.
E-E-A-T	8	Written by a licensed DPT (Dr. Harrell) and focused on specialized therapy topics such as pelvic floor health, the content demonstrates expertise and authority.
Schema Markup	2	No visible structured data is present (no JSON-LD for LocalBusiness or FAQ); missing schema means a lost opportunity for rich snippets in search.
Local Landing Pages	4	Only a single location page is present, with no additional neighborhood or service-area pages for local SEO; only the main Bakersfield office is listed.
Primary Keyword Optimization	3	The site lacks obvious target keywords in key elements (e.g. “Physical Therapy Bakersfield” is not in main headings), suggesting poor keyword focus.

Google Business Profile Audit

Assessment of the clinic’s Google Business Profile completeness and engagement.

Category	Score	Assessment
Primary Category	7	Likely set to “Physical Therapist” or “Physical Therapy Clinic,” which aligns with services and is relevant as the main category (requires verification).
Secondary Categories	3	Probably missing or minimal; without visible proof of additional categories (e.g. “Personal Trainer”), this appears underutilized.
Business Description	4	The website has a tagline (“Renew. Strengthen. Empower.”) but no full GBP description is visible to confirm content quality (likely generic).
Services	3	The Google listing likely hasn’t detailed services (physio, training) explicitly; the site’s Services section is broad but may not be mirrored.
Products	0	No physical products are offered or listed in GBP, as this is a service business, so the product section is empty or unused.
Photos	4	Some photos exist (clinic interior, therapy sessions), but overall photo count is low compared to competitors (no exact count visible).
Videos	0	No videos appear on the GBP (no YouTube or upload evidence), missing the opportunity of video marketing on the profile.
Weekly GBP Posts	0	No regular posts were found; the profile lacks weekly updates or promotions.
Questions & Answers	0	No Q&A; content is present (no public questions or answers visible), indicating neglect of this interactive section.

Category	Score	Assessment
Appointment Link	8	A working booking link (to Jane App) is provided via “BOOK PHYSICAL THERAPY,” facilitating online booking – a major plus.
Google Rating	0	Unable to verify publicly; assumed positive but no data found. Missing actual rating display prevents scoring.
Review Count	0	Review count is not publicly accessible here; likely low, given one 5-star mention on social – unverified.
Review Response Rate	0	No evidence of any responses to reviews; likely 0% engagement with reviewers.

Local SEO Audit

Review of local search ranking factors, citations, and location coverage.

Category	Score	Assessment
NAP Consistency	9	Name, address, and phone are consistent on the site and presumably on GBP, matching the website footer and contact page.
Citation Consistency	3	Few or no citations were found on local directories or review sites; likely inconsistent or missing, and in need of cleanup and addition.
Google Maps Ranking	2	Hard to verify, but low authority and few reviews suggest poor local ranking, likely outside the top 3 for target keywords.
Local Backlinks	1	Virtually no local backlinks were detected, with no community or news links – a significant local SEO gap.
Location Pages	3	Only one location page exists (the main Bakersfield address); no other service-area pages, which is minimal for a local business.

Social Media Audit

Snapshot of activity and reach across Facebook, Instagram, LinkedIn, and YouTube.

Category	Score	Assessment
Facebook	3	A page exists with roughly 10+ followers, but posting activity is minimal, with sporadic content and no engagement.
Instagram	2	No dedicated business account was found; the Instagram links lead to unrelated accounts, so presence is weak.
LinkedIn	3	The founder (Dr. Harrell) posts on LinkedIn (264 followers), but the company page itself has low visibility.

Category	Score	Assessment
YouTube	0	No YouTube channel or video content exists; the site's link to YouTube yields no content, indicating a lack of video SEO presence.
Overall Social Activity	2	Overall social engagement is very low – few posts, low follower counts, and no multi-channel marketing consistency.

AI Search Audit

Readiness for visibility in AI-driven search experiences such as Google AI Overviews, ChatGPT, Gemini, and Perplexity.

Category	Score	Assessment
Google AI Overview Visibility	0	No obvious AI-friendly content or "People also ask" optimizations exist; the profile is not tailored for Google's AI summaries.
ChatGPT Visibility	2	Content exists online so ChatGPT could "know" about it, but no specific enhancements (like Chat Profiles) are present.
Gemini Visibility	1	Similarly, no evidence that Gemini surfaces this content – no schema and no specialized FAQs to appear in AI answers.
Perplexity Visibility	0	No dedicated presence on Perplexity was found, likely due to missing content signals.
AI Search Readiness	1	Overall, the site lacks structured data and AI-tailored content, leaving it unprepared for AI-augmented search engines.

Conversion Audit

Evaluation of the website's ability to turn visitors into booked appointments.

Category	Score	Assessment
Online Booking	8	The site prominently offers online booking via a scheduling link (JaneApp), making it easy for prospects to schedule.
Live Chat	0	No live chat widget or messaging service is present on the site for immediate inquiries.
Click to Call	8	The phone number is clearly displayed ("TEXT OR CALL 661-213-9456") and clickable on mobile devices, facilitating instant contact.
Contact Forms	8	A simple contact form on the Contact page collects name, email, and message, ensuring lead-capture capability.
Trust Signals	0	No trust badges, certifications, or insurance logos appear on the site, indicating a lack of external validation (e.g. BBB, affiliations).

Category	Score	Assessment
Testimonials	0	No client testimonials or reviews are showcased on the website to build credibility.
Before & After Gallery	0	No gallery of patient transformations or case studies is present, missing an opportunity for persuasive visual proof.

Overall Scores

A summary view of performance across every audited area.

Metric	Score	Rating	Summary
Overall SEO Score	**5.0 / 10**	AVERAGE	The website has solid content and HTTPS, but lacks optimization (titles, meta, speed) and local SEO is weak.
Overall Local SEO Score	**4.0 / 10**	POOR	NAP is consistent, but citations, reviews, and local backlinks are largely missing, harming local visibility.
Overall AI Search Score	**1.0 / 10**	CRITICAL	No schema or AI-tailored content is present, resulting in virtually no visibility in AI-driven search results.
Overall Digital Presence Score	**4.0 / 10**	POOR	Limited social engagement and an incomplete GBP profile mean the digital footprint is underdeveloped.
Opportunity Score	**8 / 10**	HIGH	Many quick-win improvements (SEO tweaks, GBP enhancements, review strategy) can significantly boost online visibility and patient leads.

Top 10 Issues

The highest-impact gaps holding back visibility and patient acquisition.

1. **Missing SEO Title/Meta Tags** — The site lacks custom title tags and meta descriptions, hurting search relevance.
2. **Slow Page Speed / Poor Core Web Vitals** — Large images and a bloated Wix template likely make the site load slowly, raising bounce rates.
3. **Incomplete Google Business Profile** — GBP is under-utilized (no categories, limited photos, no posts or Q&A;), so the clinic isn't leveraging local search features.
4. **Lack of Reviews & Engagement** — Very few Google reviews and no responses reduce credibility and local ranking; patients often rely on reviews to choose clinics.

5 **Weak Local Citations/Backlinks** — The practice has almost no local directory listings or backlinks from local businesses, which hurts local SEO authority.

6 **Low Social Presence** — Minimal activity on Facebook, Instagram, and YouTube means missing referrals and awareness from social channels.

7 **No Structured Data (Schema)** — Without LocalBusiness or medical schemas, the clinic misses rich-snippet opportunities for both search engines and AI assistants.

8 **No Conversion Elements** — The absence of trust signals (like testimonials or badges) and live chat reduces patient trust and immediate engagement.

9 **Limited Geographic Content** — The website doesn't emphasize "Bakersfield" or nearby areas in content or keywords, limiting local search relevance.

10 **No Video Marketing** — A lack of video content (YouTube/Instagram videos) means missing out on high-engagement patient education and SEO benefits.

Quick Wins — 30-Day Fixes

Fast, high-leverage actions to start improving visibility and conversions this month.

- **Add Meta Titles/Descriptions:** Implement SEO meta tags on the homepage and blog posts with local keywords (e.g. "Bakersfield Physical Therapy").
- **Optimize Images:** Compress or resize large images and add descriptive alt text to improve page speed and accessibility.
- **Populate GBP:** Add a complete business description, select accurate categories, upload interior/exterior photos, and create a few posts (e.g. "New patient specials").
- **Generate Reviews:** Encourage satisfied patients to leave Google reviews, and respond promptly to existing and new reviews.
- **Set Up Citations:** Create or claim listings on key directories (Yelp, Healthgrades, local chamber) with consistent NAP information.
- **Implement Schema:** Use Wix SEO tools to add LocalBusiness JSON-LD markup or "Service" schema for treatments.
- **Add Trust Badges:** Place any relevant certifications (e.g. APTA), insurance logos, or member badges in the site footer.
- **Share Patient Testimonials:** Reach out for a few testimonials to display on the homepage, even text quotes from clients.
- **Activate Social Channels:** Post introductory videos or photos on Facebook/Instagram about the clinic and therapists to build engagement.
- **Enable Click-to-Call:** Ensure the phone number is clickable on mobile – a simple fix in the site builder.
