CLIENT STRATEGY PRESENTATION

GBP + Local SEO
Growth Strategy

A 90-day plan to turn 30+ years of patient trust into Google Maps visibility, website-driven search traffic and booked appointments across Nairobi.

Prepared for

Dr. Stella N. Kubasu

General & Family Dentistry | Ralph Bunche Rd, Upper Hill, Nairobi

Prepared by

Md. Abdul Alim

Dental SEO & AI Search Optimization Consultant

October 2026

Executive Summary

A trusted, 4.9-star practice that is almost invisible beyond its Google Business Profile.

4.9
Google rating from 79 patient reviews

30+
Years in private practice (since 1992)

0
Website pages to capture or convert search demand

10
Priority services and 10 Nairobi areas to target

The diagnosis

- Dr. Stella owns the hardest asset to buy: **34 years of trust** and a near-perfect Google reputation.
- But the Google profile carries the **entire digital load** - there is no website to rank for service searches, convert visitors or feed AI answers.
- Competitors on and around Ralph Bunche Rd already publish service pages, blogs and area content.

Main SEO challenges

- No organic footprint for "dentist Nairobi" service or area searches
- GBP traffic cannot convert fully: no web destination, no booking path
- Thin service, content and trust signals for AI search
- Name/address and social profiles not yet unified

THREE STRATEGIC MOVES

1 Activate the GBP
Categories, services, description, photos, posts, booking links - Weeks 1-4

2 Build the website
20+ page conversion site with service and area pages - live by Day 45

3 Scale trust signals
Review system, Kenyan citations, local links and AI-ready entity profile

Expected business impact (planning targets): more calls, WhatsApp chats and booking requests from Google Maps and search; 20+ indexed pages and 105+ reviews by Day 90; first-page visibility for Upper Hill, CBD and Kilimani dental searches within 6 months.

Local Market Analysis

Large, mobile-first, trust-driven market with a crowded cluster of dentists on her own street.

4.4M

Nairobi residents (2019 census) - Kenya's largest city market

5+

Dental practices on or beside Ralph Bunche Rd / Upper Hill Medical Centre

10

Target neighbourhoods from CBD to Karen

Market opportunity

- Patients search on mobile: "dentist near me", "dentist Upper Hill", "root canal Nairobi"
- Trust and experience weigh heavily in healthcare choices
- Few single-doctor practices own a clear **"experienced family dentist"** position
- Upper Hill is a medical and corporate district with steady daytime footfall

Challenges

- Large chains (e.g. Molars, Elephant Dental) dominate Maps with huge review counts
- Nearby clinics already have websites, blogs and testimonial pages
- Proximity limits Maps reach: Karen and Lavington need organic pages, not Maps alone
- Price-led searches favour volume clinics

Strategic direction

- Own the **"experienced, gentle, tooth-saving family dentist"** position
- Win the Upper Hill / CBD / Kilimani / Westlands corridor first
- Convert trust into web assets: service pages, FAQs, area pages
- Be the practice AI assistants can confidently recommend

SEARCH DEMAND MAP (INTENT TIERS - VOLUMES TO BE VALIDATED IN KEYWORD PLANNER)

Emergency / pain

tooth pain, dentist open now, root canal Nairobi

Highest urgency, high value

Family / preventive

family dentist, dental check-up, children's dentist

Repeat patients, lifetime value

Restorative

tooth-coloured fillings, gum treatment, braces

Mid-ticket, trust-led

Informational

how long does a root canal take, gum bleeding causes

Feeds AI answers and trust

Current Digital Presence Audit

Strong reputation, incomplete ecosystem: the assets exist but are not yet working together.

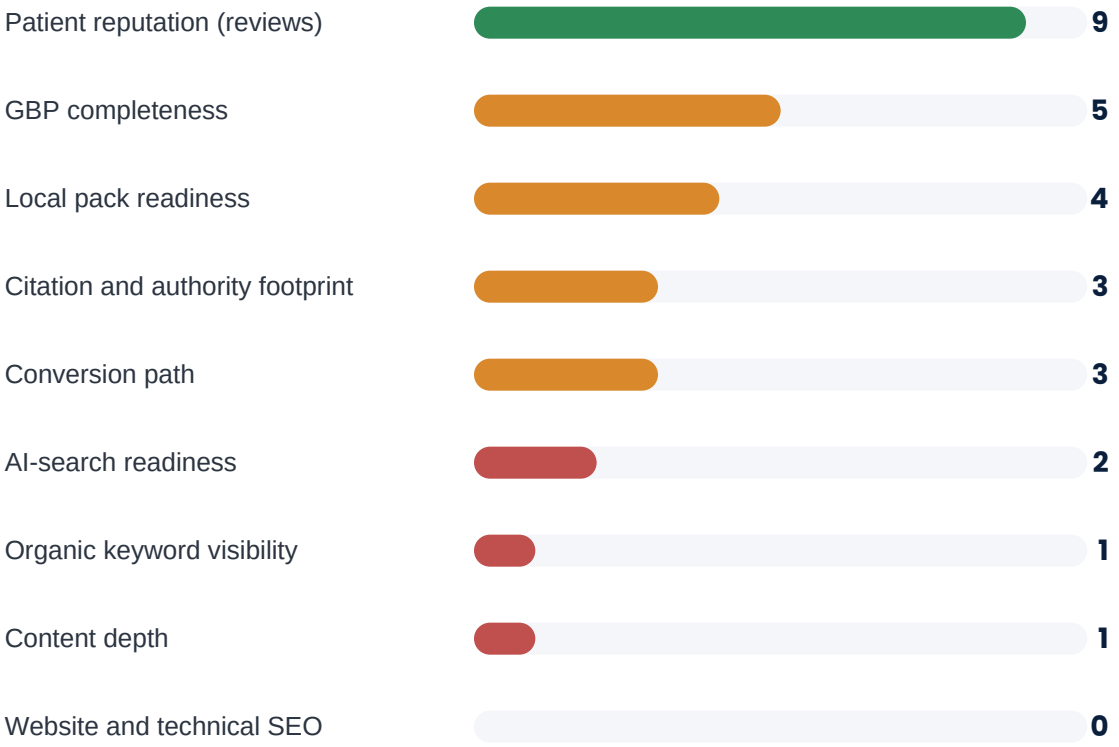

Asset	Status	What we found	Priority
Google Business Profile	**Active | 4.9 / 79**	Excellent trust signals. Services, keyword-aware description, posts, photos and booking path still to be completed.	**HIGH**
Website	**None**	No destination for organic search, no service or area pages, no conversion funnel, no schema or tracking.	**CRITICAL**
Instagram	**Active**	@drstellakubasudentalclinic exists. Needs profile link to website/WhatsApp, highlights by service, doctor-led trust content.	**MEDIUM**
Facebook	**Verify**	Linked URL is a profile.php?id= address with a Reels tab. Confirm it is a Page with username, NAP, call and WhatsApp buttons.	**MEDIUM**
LinkedIn	**Verify**	Linked profile slug does not match the doctor's name. Confirm ownership before using it as a sameAs profile for the doctor entity.	**MEDIUM**
Directories / citations	**Unaudited**	No evidence of controlled listings on Kenyan healthcare directories, Bing Places or Apple Business Connect.	**HIGH**
AI search presence	**Limited**	No website, FAQ or entity content for ChatGPT, Gemini or Google AI Overviews to quote.	**HIGH**

NAP consistency alert: the address appears as "Nelson Awori Building, 4th Floor, Wing A, Suite A2" and "Prof. Nelson Awori Centre, Ralph Bunche Rd". Choose one canonical format and use it everywhere.

SEO Baseline Analysis

Reputation is elite; every asset that converts reputation into traffic is missing or incomplete.

DIGITAL VISIBILITY SCORECARD (0-10)

Preliminary consultant assessment from the client brief and public footprint. Re-score at Day 30 with GBP Insights and Search Console data.

Finding	Impact	Priority
No website, so no organic traffic or keyword rankings	Zero capture of service and area searches	CRITICAL
No service or area pages	Cannot rank for root canal, fillings, family dentist queries	HIGH
Review volume (79) trails Nairobi leaders	Weaker prominence in the Maps pack	MEDIUM
No educational content	No trust-building or AI-citable answers	HIGH
Authority signals not yet built	Few links, mentions or citations	MEDIUM

Technical SEO Recommendations

There is no site to audit, so the opportunity is to build it technically right from Day 1.

Area	Recommendation	Impact	Priority
Domain and hosting	Register a clear domain (e.g. drstellakubasu.co.ke - confirm availability); HTTPS, reliable hosting with CDN for fast Nairobi loading	Trust and speed	CRITICAL
Mobile-first build	Most patients search on phones: sticky Call + WhatsApp + Directions bar, large tap targets, readable fonts	Conversion	CRITICAL
Speed and Core Web Vitals	Target LCP under 2.5s on 4G, compressed WebP images, no heavy sliders or video autoplay	Rankings, UX	HIGH
Indexing and structure	XML sitemap, robots.txt, canonical tags, clean URLs such as /services/root-canal-treatment-nairobi/, breadcrumb navigation	Crawlability	HIGH
Schema markup	Dentist (LocalBusiness), Person for Dr. Stella, FAQPage, BreadcrumbList, OpeningHours, sameAs links to verified profiles	AI and entity clarity	HIGH
Tracking	GA4, Search Console, UTM-tagged GBP links, events for call, WhatsApp, form and directions clicks	Measurement	HIGH
Images and trust	Real clinic and doctor photos with descriptive alt text; no generic stock-only pages	E-E-A-T	MEDIUM
Privacy and security	Privacy policy and consent on forms aligned with the Kenya Data Protection Act, 2019	Compliance	MEDIUM

Google Business Profile Audit

Status reflects the client brief; items marked Verify are checked in the GBP dashboard in Week 1.

GBP section	Status	Issue	Recommendation	Impact
Name, address, phone	Verify	Address written two ways across channels	Lock one canonical NAP; match on every listing	Maps trust
Categories	Verify	Secondary categories not confirmed	Primary: Dentist. Add only categories that match real services	Relevance
Services	Partial	Complete dental service list not published	Add all 10 priority services with descriptions	Relevance
Business description	Partial	Not yet keyword-aware or location-led	Rewrite with doctor authority + Upper Hill + services	Relevance
Photos and video	Partial	Few treatment, team and clinic photos	30+ real photos, short doctor intro video	Engagement
Posts and Q&A	Gap	No regular posting or seeded Q&A	Weekly posts, 10 seeded patient questions	Freshness
Booking path	Gap	No website or appointment link to convert	Add booking link, WhatsApp chat, call tracking	Conversions
Reviews	Strong	4.9 stars / 79 reviews; low service-specific mentions	Review system targeting treatment and area keywords	Prominence

GBP Optimization Strategy

Honest, specific and keyword-aware: no stuffing, no inflated claims, no specialist labels she does not hold.

Category plan

- **Primary:** Dentist
- **Secondary (if actively offered):** Dental clinic, Pediatric dentist, Cosmetic dentist, Emergency dental service
- **Avoid:** Endodontist and Orthodontist (specialist labels) - cover root canals and simple braces through services instead
- **Business name:** real-world name only, no keywords added

Profile assets to complete

- Appointment link and WhatsApp chat on profile
- Opening hours, accessibility and payment attributes
- Landmark-based directions: Prof. Nelson Awori Centre, Ralph Bunche Rd
- UTM-tagged website link for call/booking tracking

OPTIMIZED BUSINESS DESCRIPTION (DRAFT FOR APPROVAL)

Dr. Stella N. Kubasu is a University of Nairobi-trained general dentist (BDS, 1989) with more than 30 years of private practice in Nairobi since 1992. Our clinic at Prof. Nelson Awori Centre, Ralph Bunche Road, Upper Hill, offers gentle family dentistry: check-ups, preventive care, tooth-coloured fillings, root canal treatment, children's dentistry, gum care and simple orthodontic treatment.

Our approach is minimally invasive and pain-conscious, with a focus on saving your natural teeth. Registered with the Kenya Medical Practitioners and Dentists Board. Call or WhatsApp to book your appointment.

Length approx. 640 characters (limit 750) | Contains: authority, location, services, trust, call-to-action

Why it works: it leads with 30+ years of experience, anchors the Upper Hill location, names core services naturally and ends with a clear action.

GBP Services, Photos and Posts

Every service gets a keyword-aware description; photos and posts prove real, active, human care.

GBP service	Target keyword	Description angle
Family dental check-up	family dentist Nairobi	Long-term family dentist, all ages
Preventive care and hygiene	preventive dental care Nairobi	Scale and polish, early detection
Tooth-coloured fillings	dental fillings Nairobi	Natural-looking, tooth-saving repair
Root canal treatment	root canal treatment Nairobi	Pain-conscious infection treatment
Children's dentistry	pediatric dentist Nairobi	Calm, child-friendly visits
Gum treatment	gum treatment Nairobi	Bleeding gums and periodontal care
Simple orthodontics	orthodontic dentist Nairobi	Straightening for suitable cases

Photo type	Purpose	Frequency
Exterior + entrance + signage	Helps patients find Suite A2	Once, refresh yearly
Reception and waiting area	Reduces first-visit anxiety	Once
Dr. Stella and team	E-E-A-T and personal trust	Quarterly
Treatment room and equipment	Hygiene, modern care	Quarterly
Child-friendly moments (consented)	Parent reassurance	Monthly
Short doctor intro video	Humanises the practice	Once, update yearly

Weekly Google Post rhythm

- **Mon** Service post (root canal, fillings, gum care) | **Wed** Patient FAQ
- **Fri** Doctor expertise or tooth-saving tip | **Monthly** community / seasonal
- Each post: one keyword, one photo, one call-to-action (Call or WhatsApp)

Q&A seeding (10 questions in Week 2)

- Do you treat children? Do you offer root canal treatment?
- Where exactly is the clinic and where do I park?
- Is walk-in care available for tooth pain? How do I book?

Patient photos and before/after images only with written consent.

Google Maps Ranking Strategy

Google ranks local results on three pillars. We act on every one, and we plan around distance honestly.

Relevance

Does she match the search?

- Correct primary and secondary categories
- All 10 services listed with descriptions
- Website service pages that mirror GBP services
- Consistent services language across channels

Distance

How close is the searcher?

- Clinic sits in Upper Hill: strongest for Upper Hill, CBD, Kilimani, Kileleshwa, Hurlingham
- Westlands and Parklands: competitive for Maps, strong for organic pages
- Karen: rely on organic and reputation, not the Maps pack

Prominence

How well known and trusted?

- Grow reviews from 79 to 105 in 90 days
- Consistent NAP citations on Kenyan directories
- Local links and mentions
- Branded searches from social and doctor profile

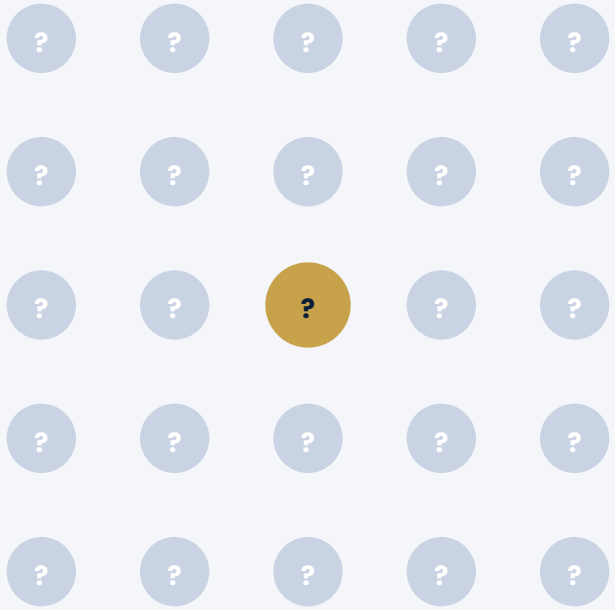

MAPS ACTION PLAN: SIX SIGNAL GROUPS

GBP signals	Review signals	Citation signals	Content signals	Authority signals	Engagement
Categories, services, attributes	8-10 new reviews / month	NAP match on 15+ listings	Service + area pages	Local links, mentions	Weekly posts, Q&A, photos

Local Ranking Grid Tracking

A geo-grid scan around the clinic shows exactly where Dr. Stella appears in the Maps pack, and where she does not.

5 x 5 SCAN GRID | ~1.5 KM SPACING

Gold = clinic location (Prof. Nelson Awori Centre). Week-1 baseline fills every point with a rank; target is green (top 3) in the core zone.

Keyword	Grid centre / areas	Current	Target (Month 6)	Frequency
dentist near me	Upper Hill grid	Baseline Wk 1	Top 3 in core zone	Monthly
dentist Upper Hill	Upper Hill grid	Baseline Wk 1	Top 3	Monthly
dentist Nairobi CBD	CBD grid	Baseline Wk 1	Top 5	Monthly
family dentist Nairobi	City-wide grid	Baseline Wk 1	Top 5	Monthly
root canal Nairobi	City-wide grid	Baseline Wk 1	Top 5	Monthly
pediatric dentist Nairobi	Kilimani / Westlands	Baseline Wk 1	Top 10	Monthly
dentist Kilimani	Kilimani grid	Baseline Wk 1	Top 5	Monthly
dentist Westlands	Westlands grid	Baseline Wk 1	Top 10	Monthly
dental fillings Nairobi	City-wide grid	Baseline Wk 1	Top 5	Quarterly

Targets are planning goals, not guarantees. Rankings are re-based after the Week-1 scan and reviewed monthly with the keyword and location mix.

Competitor Analysis

Six practices that appear for her target searches, from direct Ralph Bunche Rd neighbours to Nairobi-wide brands.

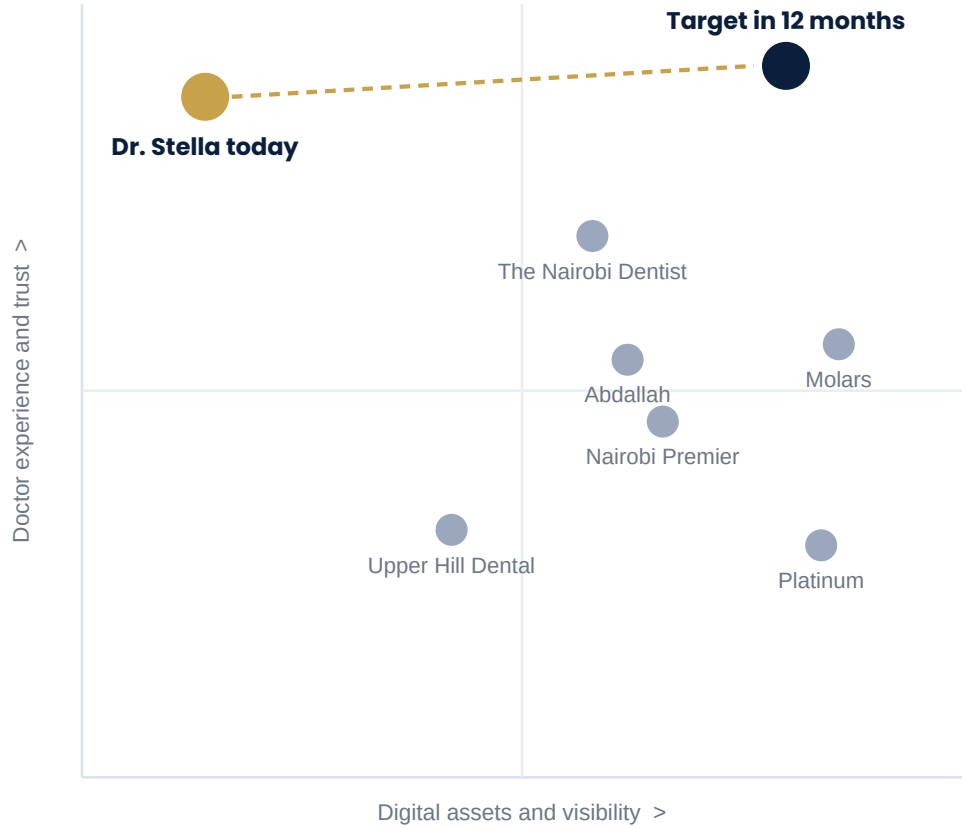

Competitor	Location	Digital assets	Reviews (indicative)	Local SEO strength	Weakness / gap to exploit
The Nairobi Dentist	Upper Hill Medical Centre, Ralph Bunche Rd	Website, testimonials, dental blog; 2 partners, 25+ yrs each	Verify live	**Medium-High**	Cosmetic and executive positioning; less "gentle family dentist" content
Upper Hill Dental Centre	Ralph Bunche Rd No. 7	Website, Facebook page, imaging and affordability message	Verify live	**Medium**	Thin service and area content; direct proximity rival
Molars Dental Clinic	Nairobi CBD	Large brand, high review volume	4.7 / 1,598*	**High**	Volume model; no personal "30-year doctor" relationship story
Nairobi Premier Dental Centre	CBD (Kimathi St)	Multi-area service coverage content	4.8 / 129*	**Medium-High**	Generic coverage; no minimally invasive niche
Abdallah and Associates	Nairobi CBD / City Square	35-year story, "best dentist in X" location content	Verify live	**Medium**	Strong claims, limited patient-education depth
Platinum Dental Clinic	Freedom Heights, Lang'ata Rd	Publishes "best dental clinics" guides covering many areas	Verify live	**Medium**	Far from Upper Hill; wins AI and listicle visibility

* Review counts from a third-party roundup (2023 snapshot) and must be refreshed live from Google Maps before client delivery. "Verify live" = pull current rating and count from each Google profile. Backlink strength to be measured with Ahrefs or Semrush in Week 1.

Competitive Advantage Strategy

She wins by pairing the most credible doctor story on the street with the digital assets competitors already have.

POSITIONING MAP (ILLUSTRATIVE, CONSULTANT JUDGMENT)

What competitors are missing

- A single doctor with 30+ years who owns the "tooth-saving, minimally invasive" story
- Warm, parent-friendly pediatric and family messaging
- Clear educational answers AI assistants can quote

Where we attack first

- **1.** Upper Hill and CBD Maps pack: optimized GBP + reviews
- **2.** Service pages: root canal, fillings, family, pediatric, gum care
- **3.** Review velocity: 8-10 detailed reviews a month
- **4.** AI search: FAQ, schema and trusted profile mentions

POSITIONING STATEMENT

"Nairobi's experienced family dentist for gentle, tooth-saving care - trusted by patients for over 30 years in Upper Hill."

Priority: speak to parents, professionals in Upper Hill and patients who fear dental pain.

Local Keyword Strategy

Keywords are grouped by intent and mapped to a specific page. Volumes are validated in Keyword Planner at Day 15.

Keyword	Intent	Funnel	Business value	Target page
dentist Nairobi / dental clinic Nairobi	Local	Mid	**High**	Homepage
general dentist Nairobi	Local service	Mid	**High**	/general-dentist-nairobi/
family dentist Nairobi	Local service	Mid	**High**	/family-dentist-nairobi/
root canal treatment Nairobi	Commercial	Bottom	**Very high**	/root-canal-treatment-nairobi/
tooth pain dentist Nairobi	Urgent	Bottom	**Very high**	/tooth-pain-treatment-nairobi/
dental fillings Nairobi	Commercial	Bottom	**High**	/tooth-coloured-fillings-nairobi/
pediatric dentist Nairobi	Local service	Mid	**High**	/pediatric-dentist-nairobi/
gum treatment Nairobi	Commercial	Mid	**Medium**	/gum-treatment-nairobi/
dentist Upper Hill / near Kilimani	Near me	Bottom	**Very high**	Area pages
book dentist appointment Nairobi	Transactional	Bottom	**Very high**	/book-appointment/
how long does a root canal take	Informational	Top	Medium	Blog + FAQ

AI and voice queries to win

- "Who is an experienced family dentist in Upper Hill, Nairobi?"
- "Which Nairobi dentist treats children gently?"

Rules we follow

- One primary keyword per page; no keyword stuffing
- Write for patients first, search engines second

Brief priority services also include "cosmetic / restorative dentist Nairobi": we target it through tooth-coloured fillings and restorative pages without claiming cosmetic specialisation.

Service Page Strategy

Each priority service gets a dedicated page built on the same patient-first blueprint.

Service page	Recommended URL	Title tag (60 chars)	Primary CTA
General and family dentistry	/family-dentist-nairobi/	Family Dentist in Nairobi | Dr. Stella Kubasu, Upper Hill	Book check-up
Root canal treatment	/root-canal-treatment-nairobi/	Root Canal Treatment Nairobi | Pain-Conscious Care	Call for tooth pain
Tooth-coloured fillings	/tooth-coloured-fillings-nairobi/	Tooth-Coloured Fillings Nairobi | Save Your Tooth	Book appointment
Pediatric dentistry	/pediatric-dentist-nairobi/	Pediatric Dentist Nairobi | Gentle Children's Care	WhatsApp parent
Preventive dentistry	/preventive-dental-care-nairobi/	Preventive Dental Care Nairobi | Check-ups and Cleaning	Book check-up
Gum treatment	/gum-treatment-nairobi/	Gum Treatment Nairobi | Periodontal Care	Book assessment
Orthodontic treatment	/orthodontic-treatment-nairobi/	Orthodontic Dentist Nairobi | Simple Braces Options	Request consultation

PAGE BLUEPRINT (USED ON EVERY SERVICE PAGE)

Every page also carries: Dr. Stella's credentials, real clinic photos, internal links to the matching area pages, and Dentist + FAQ schema.

Location Page Strategy

Real local pages, rolled out in tiers. No doorway pages: every page needs genuine area content.

Tier	Area page	Target keyword	URL	Local signals required
1	Upper Hill (HQ)	dentist Upper Hill	/dentist-upper-hill/	Ralph Bunche Rd directions, Nelson Awori Centre, parking, nearby offices
1	Nairobi CBD	dentist Nairobi CBD	/dentist-near-nairobi-cbd/	Matatu/Uber route, lunch-hour appointments
1	Kilimani / Kileleshwa / Hurlingham	dentist Kilimani	/dentist-near-kilimani/	Drive times, nearby landmarks, family focus
1	Westlands / Parklands	dentist near Westlands	/dentist-near-westlands/	Route via Waiyaki Way / Ring Rd, commuter hours
2	Lavington / Riverside	dentist near Lavington	/dentist-near-lavington/	School-run friendly slots, parent reviews
2	Karen	dentist near Karen	/dentist-near-karen/	Honest drive-time guidance, referral stories
Core	Dentist in Nairobi	dentist Nairobi	Homepage	Brand + services overview, doctor authority

Every area page includes

- Local introduction and how to reach the clinic
- Services available and area-specific FAQs
- Embedded map, directions, trust signals and reviews

Why Tier 1 first

- Strongest proximity and Maps potential from Upper Hill
- Tier 2 pages only after patient-story and local proof exist
- Quality over quantity protects against thin content

Internal linking: service pages, area pages, blog guides and FAQs all link to one another, so every page sits two clicks from the booking CTA.

Local Content Strategy

Answer the questions anxious Nairobi patients actually ask, in Dr. Stella's experienced voice.

Content title	Keyword	Funnel	Type
How long does a root canal take, and does it hurt?	root canal Nairobi	Top	Guide + FAQ
Tooth-coloured fillings vs. extraction: saving your tooth	dental fillings Nairobi	Mid	Service education
When should a child first see a dentist?	pediatric dentist Nairobi	Top	Parent guide
Bleeding gums: causes and when to see a dentist	gum treatment Nairobi	Top	Blog
Tooth pain at night: what to do before you see us	tooth pain dentist Nairobi	Top	Emergency guide
How often should adults have a dental check-up?	dental check-up Nairobi	Top	Blog
Choosing a family dentist in Nairobi: 7 questions to ask	family dentist Nairobi	Mid	Decision guide
30 years of tooth-saving dentistry: a conversation with Dr. Stella	Brand + doctor	Mid	Doctor profile
Getting to the clinic from Kilimani, Westlands and CBD	dentist near me areas	Bottom	Location content

Cadence

- 2 articles per month
- 1 service-page refresh per month
- Weekly GBP posts

Content rules

- Written or reviewed by Dr. Stella
- Plain English, optional Swahili summaries
- Every post links to a service page

Gap vs. competitors: nearby clinics publish blogs and "best dentist in X" pages; none visibly owns minimally invasive, tooth-saving family care.

E-E-A-T and Medical Trust Strategy

Dental is a "your money, your life" topic. Google and AI engines look for proof of real expertise.

Experience

- Practising privately since 1992: 30+ years
- Show patient stories, case insights and clinic photos (with consent)
- Add "Years in practice" counter and doctor timeline
- **Missing today:** no patient stories or case examples online

Expertise

- BDS, University of Nairobi (1989)
- KMPDB registered and licensed: display registration details
- Doctor bio page with Person schema and continuing education
- **Missing today:** no doctor bio page or visible credentials

Authoritativeness

- Doctor and clinic on verified directories and professional bodies
- Local media or expert-quote opportunities
- Consistent profiles on GBP, Facebook, Instagram, LinkedIn
- **Missing today:** no website; limited directory and media mentions

Trustworthiness

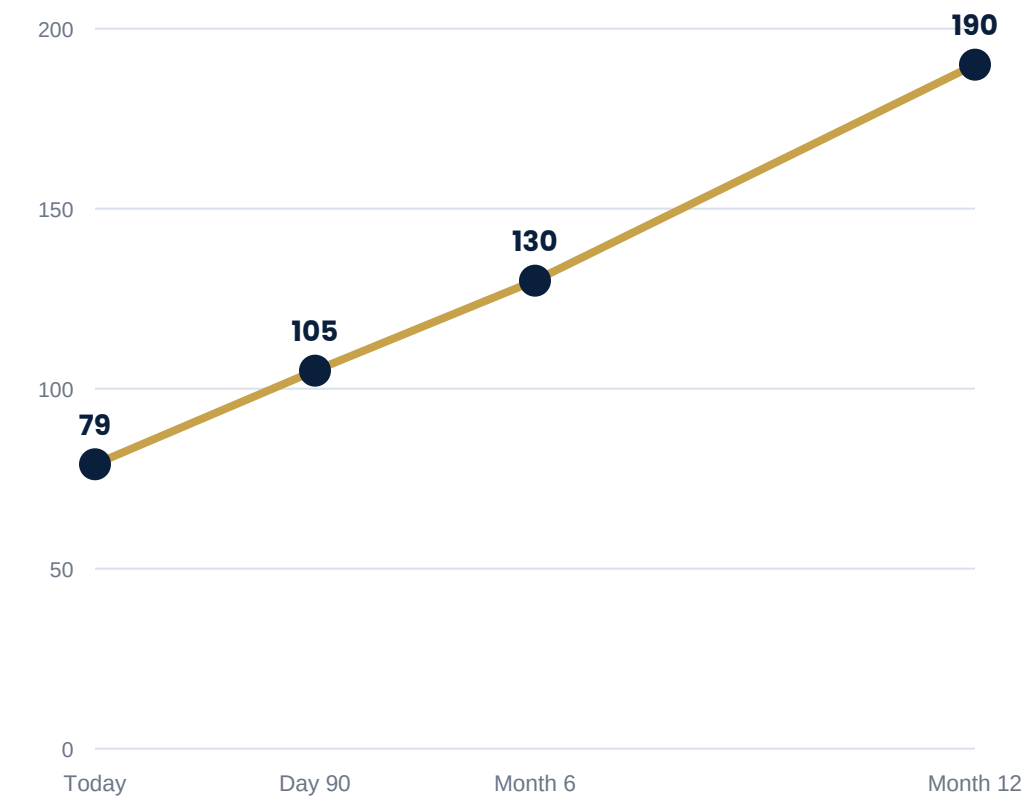

- Clear NAP, hours, phone, WhatsApp, map
- Review widget with real 4.9-star feedback
- Privacy policy, treatment-risk disclaimers, medically reviewed content
- **Missing today:** no website trust elements or privacy information

Impact: stronger trust lifts conversion on the website and makes Dr. Stella a safer, more citable source for AI assistants.

Review Growth Strategy

Rating is already elite. The goal is volume, recency and service-specific wording.

REVIEW COUNT TARGET (PLANNING GOAL)

Maintain rating at 4.8 or above

Review acquisition system

- **When:** right after a successful visit or when pain has resolved
- **How:** WhatsApp message with short Google review link + QR code at reception
- **Who:** reception owns it, Dr. Stella thanks patients personally
- **Pace:** 8-10 new reviews per month

REQUEST TEMPLATE (SERVICE-SPECIFIC)

"Thank you for visiting Dr. Stella's clinic today. If you were happy with your [root canal / filling / check-up], would you share a short Google review? It helps other families in Nairobi find gentle, experienced care: [link]"

Response strategy: reply to every review within 48 hours using the patient's name and treatment, without sharing private health details. For negative reviews: thank, apologise for the experience, invite offline contact. Never offer incentives for reviews.

Citation Strategy

Same name, address and phone everywhere. Start with platforms patients and AI tools already use.

Platform	Purpose	SEO value	Priority
Google Business Profile	Core Maps listing	Primary local signal	CRITICAL
Bing Places and Apple Business Connect	Alternative maps and Siri / Copilot results	Coverage + AI	HIGH
Facebook Page, Instagram, LinkedIn	Verified brand and doctor profiles	Entity and trust	HIGH
Dabadoc and Vezeeta (Kenya)	Doctor discovery and booking directories	Healthcare citations	HIGH
Hauzisha and local clinic roundups	Clinic listings read by AI engines	Mentions	MEDIUM
Kenya Dental Association (if member)	Professional credibility	Authority	MEDIUM
Prof. Nelson Awori Centre tenant listing	Building-level local relevance	Proximity	MEDIUM
Quality Kenyan business directories	General business citations	NAP reinforcement	MEDIUM

NAP standard (lock in Week 1)

- One business name, one address format, one primary phone
- Same wording on GBP, website footer and every directory

Citation workflow

- Audit existing listings, fix duplicates and wrong details
- Batch 1 (Weeks 5-8): 8 core listings; Batch 2 (Weeks 9-12): remaining

Quality beats quantity: skip low-grade spam directories.

Local Link Building Strategy

Earned, relevant links and mentions only. No paid link schemes, no private blog networks.

Opportunity	Implementation method	SEO value	Priority
Healthcare referral network	Mutual links with GPs, pediatricians, labs around Upper Hill medical district	Relevance + referrals	HIGH
University of Nairobi alumni	Alumni profile and dental-school community mention	Authority	MEDIUM
Kenya Dental Association / professional bodies	Member directory and event mentions where eligible	Credibility	MEDIUM
Schools and parent groups	Children's oral health talks; resource page links	Local links + trust	HIGH
Upper Hill employers	Corporate wellness check-up offers; partner pages	Local links + patients	MEDIUM
Local media	Expert quotes on oral health in Kenyan press and radio	Brand mentions	MEDIUM
Community sponsorships	Health days, school or church events with a website link	Local relevance	LOW

90-DAY LINK TARGET

8-10 relevant local links and mentions by Day 90, anchored by a doctor profile, a children's oral-health resource and two community partnerships.

AI Search Optimization Strategy

ChatGPT, Gemini and Google AI Overviews recommend clinics they can verify across consistent, credible sources.

Entity optimization

- Business, doctor, services and Upper Hill location clearly defined on the website
- Same facts on GBP, directories and social profiles
- sameAs links in schema to verified profiles
- Use the doctor's full professional name consistently

Content and schema

- FAQ answers in clear 2-3 sentence form
- Dentist, Person, FAQPage and LocalBusiness schema
- Note: FAQ rich results are limited by Google, but the structure still helps AI parsing
- Homepage summary: who, where, what we treat

Authority signals

- Detailed reviews mentioning services and areas
- Mentions on Dabadoc, Vezeeta, local roundups
- Expert quotes from Dr. Stella
- Identical clinic facts on every profile

MONTHLY AI VISIBILITY TEST: PROMPTS WE TRACK

- *"Who is a good family dentist in Upper Hill, Nairobi?"*
- *"Best dentist for a root canal in Nairobi CBD"*
- *"Gentle pediatric dentist near Kilimani"*
- *"Experienced dentist in Nairobi who saves natural teeth"*

Status today: no website or entity content to cite | Target: named in at least 2 of 4 prompts by Month 6.

Conversion Strategy

Every channel should lead to one of five actions: call, WhatsApp, book, request consultation, get directions.

Channel	Conversion improvement	Expected impact	Priority
GBP	WhatsApp chat, appointment link, tracked call button, "book a check-up" post CTA	More calls and chats	QUICK WIN
Website	Sticky call/WhatsApp bar, short booking form, click-to-call on every page	Higher enquiry rate	HIGH
Service pages	One clear CTA per page, doctor photo, FAQs, pain-conscious messaging	Fear-reducing conversion	HIGH
Instagram / Facebook	Link in bio to booking, WhatsApp button, service highlights	Social-to-booking	MEDIUM
Reception workflow	Respond to WhatsApp within 15 minutes, log source of each new patient	Lead handling, tracking	HIGH
Patient info	Hours, parking, directions, accepted payment and insurance options visible	Fewer drop-offs	MEDIUM

KPI Dashboard

Baselines are captured in Week 1. Targets are planning goals, recalibrated at Day 30 with real data.

Metric	Baseline	Day 90	Month 6	Month 12
Google reviews	79	105	130	190
Average rating	4.9	4.8+	4.8+	4.8+
GBP calls + WhatsApp + directions / month	Capture Wk 1	+25%	+50%	+100%
GBP search views / month	Capture Wk 1	+30%	+70%	+150%
Website pages indexed	0	20+	30+	45+
Organic sessions / month	0	150	600	1,500
Local pack: dentist Upper Hill	Baseline scan	Top 5	Top 3	Top 3 (hold)
New-patient enquiries / month	Capture Wk 1	+30%	+60%	+100%
Local links / mentions	0 tracked	8-10	15+	30+
AI prompts naming the clinic	0 of 4	1 of 4	2 of 4	3 of 4

TRACKING STACK

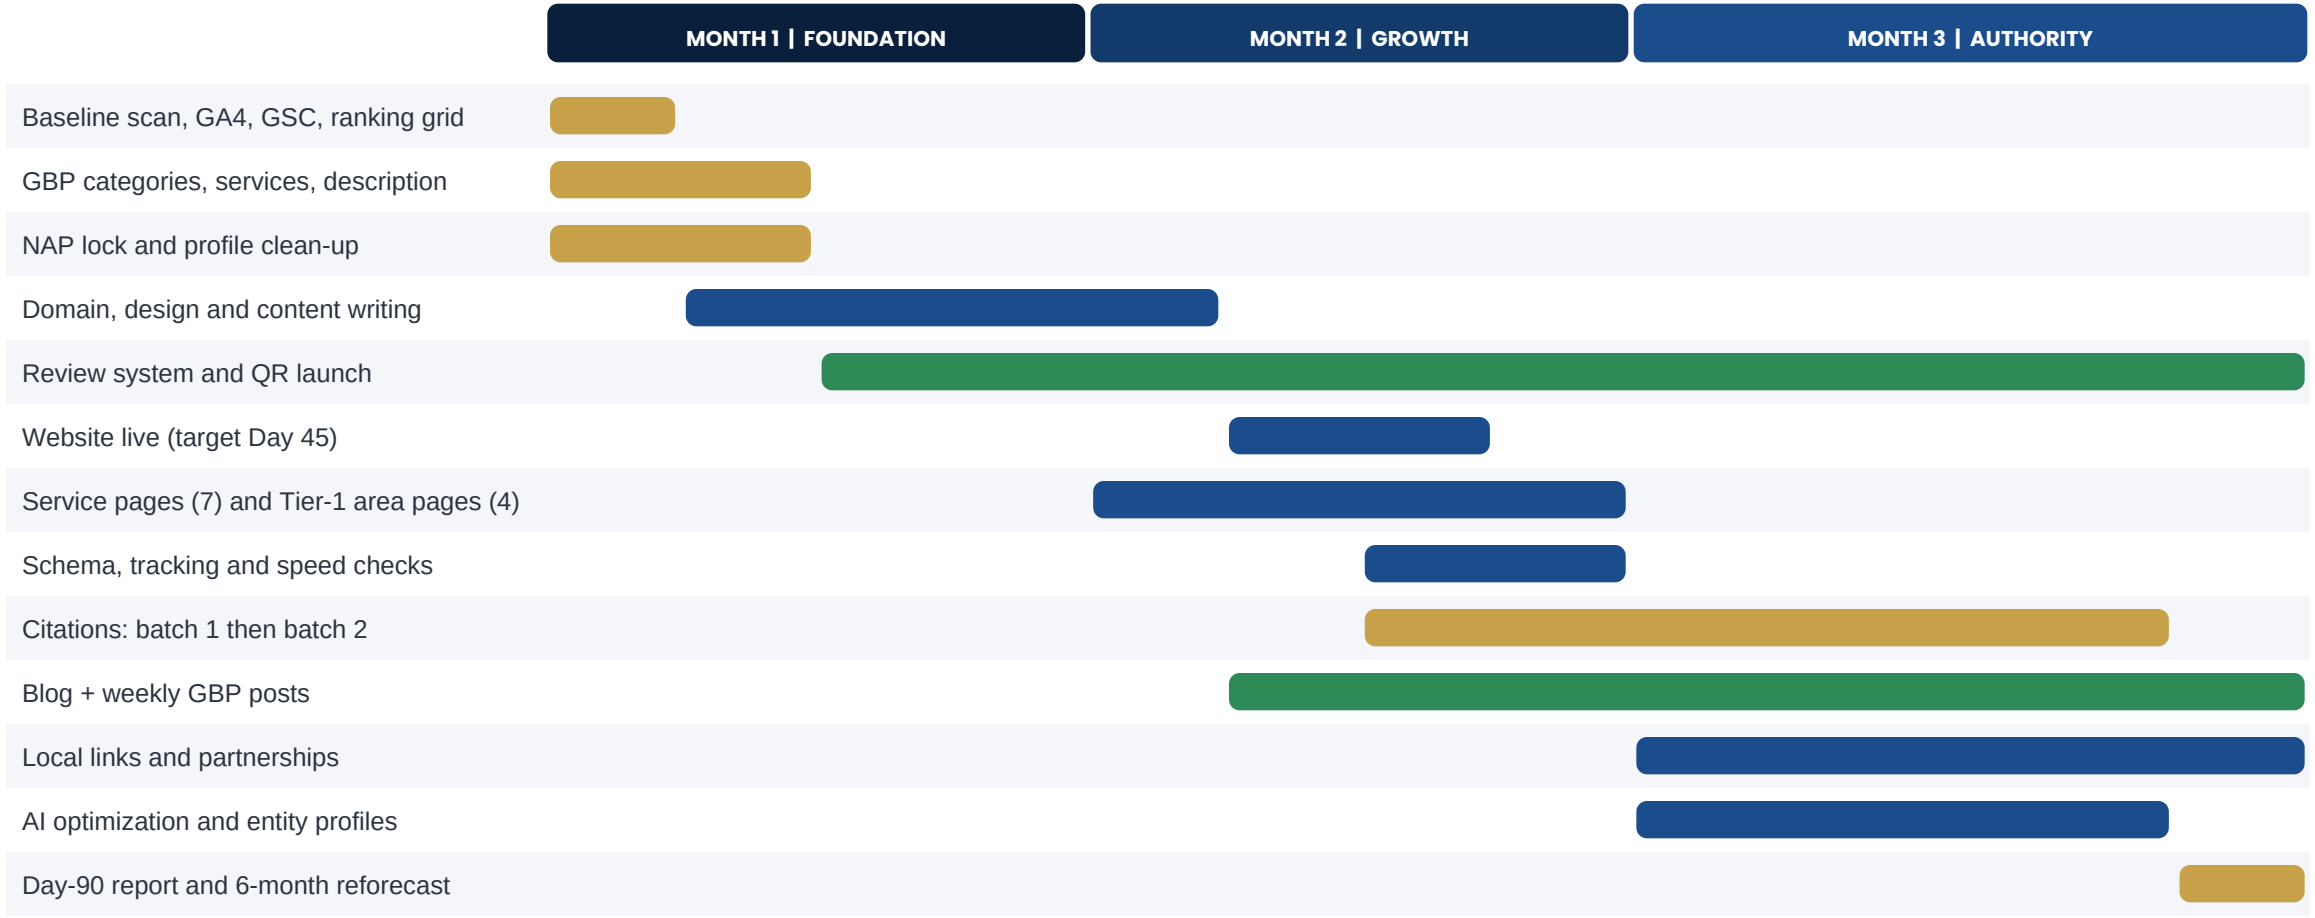

- Google Business Profile Insights
- Google Search Console
- GA4 with call/WhatsApp events
- Geo-grid rank tracker
- Monthly review count log
- Reception source-of-patient log

Monthly report: 1-page scorecard

Targets are planning goals, not guarantees.

90-Day Growth Roadmap

Quick wins on the GBP first, then the website, then authority: each phase builds on the one before.

Dependency logic: GBP fixes and tracking need no website (quick ROI) | service and area pages depend on approved content | citations and link outreach depend on the live website and consistent NAP.

Priority Action Plan

Start with what is high impact and low effort, then build the assets that compound.

Quick wins

High impact, low difficulty

- Rewrite GBP description, services, categories
  Impact: High | Effort: Low
- Add WhatsApp, booking link, hours, attributes
  Impact: High | Effort: Low
- Upload 30+ real photos and an intro video
  Impact: High | Effort: Low
- Launch review QR code and WhatsApp request
  Impact: High | Effort: Low
- Lock NAP; claim Dabadoc and Vezeeta profiles
  Impact: High | Effort: Low

High priority

High impact, medium difficulty

- Build and launch the 20+ page website
  Impact: High | Effort: Medium
- Publish 7 service pages with FAQ
  Impact: High | Effort: Medium
- Publish Tier-1 area pages
  Impact: High | Effort: Medium
- Install schema, GA4 and call tracking
  Impact: High | Effort: Medium
- Content calendar: 2 articles per month
  Impact: High | Effort: Medium

Long-term growth

Authority and advantage

- Build local links and referral partnerships
  Impact: Med-High | Effort: High
- Expand to Tier-2 area pages
  Impact: Med-High | Effort: High
- Doctor thought-leadership and media quotes
  Impact: Med-High | Effort: High
- Patient stories and video library
  Impact: Med-High | Effort: High
- Quarterly strategy and ranking-grid review
  Impact: Med-High | Effort: High

IMPLEMENTATION DEPENDENCY PLAN

Foundation (Month 1)

GBP, NAP and tracking need no website, so they deliver the fastest return. Dependency: none.

Growth (Month 2)

Website, service and area pages go live once copy is approved. Dependency: clinic facts and photos.

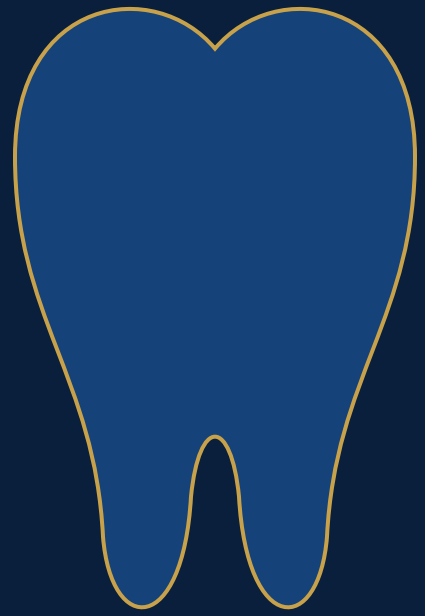

Authority (Month 3)

Citations, links and AI profiles need a live site and one consistent NAP. Dependency: Foundation + Growth.

NEXT STEPS

Let's turn trust into patients

To lock the Week-1 baseline and start the quick wins, we need four things from the clinic:

1. **GBP Manager access**
   To audit categories, services, insights and edit the profile
2. **Clinic facts**
   Confirmed services, hours, phone / WhatsApp number, payment and insurance options
3. **Photos and consent**
   Real clinic, team and doctor photos; written consent for patient images
4. **Doctor approval**
   Business description, service copy and doctor bio drafts

Targets are planning goals, not guarantees. Competitor review figures come from public third-party sources and are refreshed before each presentation.
