DETAILED DIGITAL PRESENCE & SEO AUDIT REPORT

# Oyler Family Dentistry

Website · Google Business Profile · Local SEO · Social · AI Search · Conversion

*1500 Flossie Dr Ste A, Greendale, IN 47025*

Audited by Md. Abdul Alim
Local SEO & AI Search Optimization Consultant
Audit Date: August 26, 2026

# Website SEO Audit

| Category | Score | Assessment |
|---|---|---|
| **Website Indexing** | 9/10 | Google indexes the homepage, service pages (e.g. Wisdom Teeth Removal, Dental Implants), team page, and multiple blog articles — a healthy, broad footprint confirmed via site: search. |
| **HTTPS** | 10/10 | Every page crawled (homepage, connect-with-us, meet-the-team, advanced-smile-care, articles, service pages) loads on https:// with a clean canonical tag. |
| **Mobile Friendly** | 8/10 | All crawled pages include a proper responsive viewport meta tag (width=device-width, initial-scale=1); actual rendered layout could not be visually tested with available tools. |
| **Page Speed** | — | Unable to Verify — no PageSpeed/Lighthouse tool available. Flagging a risk signal: the homepage embeds an autoplay hero MP4 plus multiple Vimeo iframes, which commonly hurts load time on this kind of stack. |
| **Core Web Vitals** | — | Unable to Verify — requires Google PageSpeed Insights / CrUX data, not accessible with current tools. |
| **Technical SEO** | 8/10 | Consistent canonical tags, clean URL structure, and full OG/Twitter card metadata were found on every page crawled. |
| **On-Page SEO** | 6/10 | Titles are strong and keyword-rich, but several pages (e.g. Savings Program, Dental Implants) have thin or completely empty meta descriptions, which weakens click-through from search results. |
| **Title Tags** | 8/10 | Service pages use a strong city+service pattern (e.g. "Dental Implants Lawrenceburg \| Tooth Replacement \| Oyler Family Dentistry"), though the city used in titles is inconsistent — see Local SEO. |
| **Meta Descriptions** | 5/10 | The homepage and most core pages have descriptions, but the Dental Implants service page meta description is entirely blank and the Savings Program description is generic boilerplate rather than benefit-driven copy. |
| **Header Structure** | 7/10 | Pages use a clear H1 per page (e.g. "dentist in greendale, IN", "advanced smile care") with H2/H3 subsections for services, though heading hierarchy is stylistic (lowercase, split across two lines) rather than strictly semantic in places. |
| **Internal Linking** | 4/10 | The Dental Implants page links to "https://www.oylerdds.com/contact.html" (a URL that does not match the real contact page, /connect-with-us) and to a malformed relative link "dental-implant-failure-and-salvage.html" missing its domain/path — both are broken or unreliable links found directly in the crawled content. |
| **Image Optimization** | 5/10 | Website images are served in modern .webp format, which is good, but several images on the homepage and interior pages carry empty alt attributes in the crawled markup, missing an accessibility/SEO opportunity. |
| **Content Quality** | 9/10 | Service pages (e.g. Dental Implants) run long-form with FAQs, cost transparency, and step-by-step process explanations — well above typical dental-site depth. |
| **Blog Strategy** | 6/10 | An active Articles section with 17+ posts covering implants, sedation, Invisalign, and cosmetic dentistry was found, but no publish dates are visible anywhere on the listing or article pages, making freshness unverifiable to |

| Category | Score | Assessment |
|---|---|---|
| | | readers and to AI crawlers. |
| **E-E-A-T** | 9/10 | Meet the Team page names each dentist with full credentials (DDS, FAGD), dental school, decades of experience, and named professional memberships (ADA, Indiana Dental Association, AGD Fellowship, Spear Education) — strong, verifiable expertise signals. |
| **Local Landing Pages** | 4/10 | Content mentions Greendale and Lawrenceburg within existing service pages, but there are no dedicated location/service-area landing pages (e.g. for Aurora or Dillsboro, IN) beyond the single practice location. |
| **Primary Keyword Optimization** | 7/10 | Core service terms (dental implants, Invisalign, family dentist, cosmetic dentistry) are well represented in titles and body copy across the service-page architecture found during the crawl. |

## Google Business Profile Audit

| Category | Score | Assessment |
|---|---|---|
| **Primary Category** | 7/10 | The listing is categorized under "Dentist," a correct and searchable primary category confirmed via live Google Business data. |
| **Secondary Categories** | — | Unable to Verify — Google's public listing data surfaced through the mapping tool does not expose the full secondary-category list (e.g. Cosmetic Dentist, Orthodontist); this requires the GBP owner dashboard. |
| **Business Description** | — | Unable to Verify — the GBP business description field is not exposed by public map data and only visible from the owner dashboard. |
| **Services** | — | Unable to Verify — the structured GBP Services list is not returned by public map data. |
| **Products** | — | Unable to Verify — GBP Products tab is not exposed by public map data. |
| **Photos** | — | Unable to Verify precise GBP photo count — public map data did not return a photo count for the Google listing itself (a third-party site, Yelp, separately shows 15 photos on its own listing). |
| **Videos** | — | Unable to Verify — GBP video uploads are not exposed by public map data. |
| **Weekly GBP Posts** | — | Unable to Verify — GBP Posts activity lives behind the owner dashboard and is not visible through available tools. |
| **Questions & Answers** | — | Unable to Verify — the GBP Q&A feature is not exposed by public map data. |
| **Appointment Link** | — | Unable to Verify whether a direct booking link is attached to the GBP listing itself; the website's own "Book An Appointment" button opens a request form rather than real-time scheduling (see Conversion Audit). |
| **Google Rating** | 10/10 | 5.0 average rating confirmed live on the Google Business Profile — an excellent, top-tier score. |
| **Review Count** | 10/10 | 613 Google reviews confirmed live — a very strong volume for a single-location practice, reinforcing local trust and prominence. |
| **Review Response Rate** | — | Unable to Verify — whether the practice responds to reviews is not visible |

| Category | Score | Assessment |
|---|---|---|
| | | through the public map data returned by available tools. |

## Local SEO Audit

| Category | Score | Assessment |
|---|---|---|
| **NAP Consistency** | 4/10 | The website and Google/Yelp list the city as "Greendale, IN," while Facebook, the Instagram bio, X/Twitter, Nextdoor, and a PatientConnect365 directory listing all list "Lawrenceburg, IN" at the same 1500 Flossie Drive address — and the website's own blog title ("Meet Your New Dentist In Lawrenceburg") and a service-page title tag reinforce the Lawrenceburg name too. This is a genuine, provable city-name split across the citation profile. |
| **Citation Consistency** | 6/10 | The practice is well cited across Yelp, Healthgrades, WebMD, Delta Dental, YellowPages, Nextdoor, and ZoomInfo — a solid citation volume — but the Greendale/Lawrenceburg split found above runs through several of these citations as well, diluting consistency. |
| **Local Backlinks** | — | Unable to Verify — assessing true referring-domain quality/quantity requires a backlink index tool (e.g. Ahrefs, Moz, Semrush) that isn't available; the directory placements found above are a partial, not complete, picture. |
| **Location Pages** | 4/10 | No dedicated landing pages for nearby service areas (e.g. Aurora, Lawrenceburg proper, West Harrison) were found in the site's navigation or crawled URLs — city references are folded into existing service-page copy rather than purpose-built local pages. |

## Social Media Audit

| Category | Score | Assessment |
|---|---|---|
| **Facebook** | 8/10 | Active page with 1,356 likes, 141 people talking about it, 382 check-ins, a 100% recommend rate across 107 Facebook reviews, and a post found timestamped just 2 hours before this audit — genuinely active. |
| **Instagram** | 7/10 | @oylerfamilydentistry is active with 436 followers, 218 following, and 412 posts, and the bio correctly leads with the Invisalign-certified/cosmetic-dentistry positioning. |
| **LinkedIn** | 6/10 | A company page ("BRIAN C OYLER FAMILY DENTISTRY PC") exists alongside a personal profile for Dr. Oyler with a recent post about hiring a front office assistant — present and lightly active, though thinner than Facebook/Instagram. |
| **YouTube** | 2/10 | No discoverable YouTube channel was found; the practice's video content (hero video, team/technology videos) is hosted on Vimeo instead, so it isn't earning YouTube's own search/discovery value. |

| Category | Score | Assessment |
|---|---|---|
| **Overall Social Activity** | 6/10 | Strong, current activity on Facebook and Instagram carries the profile, but the absence of YouTube and the comparatively quiet LinkedIn presence pull the overall picture down. |

## AI Search Audit

| Category | Score | Assessment |
|---|---|---|
| **Google AI Overview Visibility** | — | Unable to Verify direct inclusion — no tool confirms live AI Overview panels — but the site's FAQ-formatted service content (e.g. "Can I Take Dental Implants Out?", "Am I Too Old for Dental Implants?") is exactly the structure AI Overviews tend to pull from. |
| **ChatGPT Visibility** | — | Unable to Verify — no public tool confirms whether the practice appears in ChatGPT's live search/browsing results. |
| **Gemini Visibility** | — | Unable to Verify — no public tool confirms third-party inclusion in Gemini's answers. |
| **Perplexity Visibility** | — | Unable to Verify — no public tool confirms third-party inclusion in Perplexity's answers. |
| **AI Search Readiness** | 6/10 | Long-form, question-and-answer service content and named-practitioner credentials give the site good raw material for AI citation, but the empty meta descriptions and the Greendale/Lawrenceburg name split found elsewhere in this audit create entity-resolution ambiguity that can work against consistent AI citation. |

## Conversion Audit

| Category | Score | Assessment |
|---|---|---|
| **Online Booking** | 5/10 | Every "Book An Appointment"/"Schedule appointment" button on the site opens a "Request An Appointment" form (name, phone, email, preferred dates/times, message) rather than a live calendar with real-time slot selection — a lead form, not instant booking. |
| **Live Chat** | 2/10 | No live chat widget was found on any of the pages crawled (homepage, connect-with-us, service pages). |
| **Click to Call** | 10/10 | A tel: link to (812) 537-4272 appears in the header, footer, and contact sections of every page crawled. |
| **Contact Forms** | 8/10 | Both a general "send us a message" form on the Connect page and the sitewide appointment-request modal were found and functioning as lead-capture points. |
| **Trust Signals** | 8/10 | Named-dentist credentials, professional association memberships, a 40+/45+ year practice history, and financing options (CareCredit) are all documented on-site. |

| Category | Score | Assessment |
|---|---|---|
| **Testimonials** | 8/10 | Multiple attributed patient testimonials (e.g. Amy B., Kaitlin S., Tom M.) appear across the homepage, team page, and service pages. |
| **Before & After Gallery** | 2/10 | No before-and-after photo gallery was found anywhere in the site's navigation or the pages crawled, despite the practice's heavy emphasis on cosmetic "smile transformation" content — a missed conversion opportunity for exactly the service it markets hardest. |

## Overall Scores

| Metric | Score | Rating | Summary |
|---|---|---|---|
| **Overall SEO Score** | 7/10 | **Good** | Average of the 15 scorable Website SEO factors — strong content and E-E-A-T pulled down by empty meta descriptions and a broken internal link found on a key service page. |
| **Overall Local SEO Score** | 7/10 | **Good** | Blends an excellent, high-volume Google Business Profile (5.0 stars, 613 reviews) with a Local SEO score held back by the documented Greendale/Lawrenceburg NAP split. |
| **Overall AI Search Score** | 6/10 | **Average** | FAQ-rich, well-structured content gives real AI-citation potential, but most sub-factors are unverifiable with public tools and the NAP inconsistency muddies entity resolution. |
| **Overall Digital Presence Score** | 6/10 | **Average** | Average of all six scored categories (Website SEO, GBP, Local SEO, Social Media, AI Search, Conversion) — a genuinely strong clinical reputation not yet fully matched by execution. |
| **Opportunity Score** | 8/10 | **High Upside** | A 5.0-star, 613-review reputation and deep service content are rare assets for a single-location practice — fixing the NAP split, meta descriptions, broken link, and booking/gallery gaps could unlock outsized gains fast. |

## Top 10 Issues

1. City-name (NAP) inconsistency: the website and Google/Yelp list "Greendale, IN," while Facebook, Instagram, X/Twitter, Nextdoor, and a PatientConnect365 directory listing — plus the site's own blog title "Meet Your New Dentist In Lawrenceburg" — use "Lawrenceburg, IN" for the same 1500 Flossie Drive address. This is the single biggest, most provable local SEO issue found.

2. No before-and-after photo gallery anywhere on the site, despite heavy on-page emphasis on cosmetic "smile transformation" content — a direct mismatch between marketing message and available proof.

3. Broken/malformed internal links on the Dental Implants page: a link to "https://www.oylerdds.com/contact.html" (which doesn't match the real contact page, /connect-with-us) and a relative link missing its domain path ("dental-implant-failure-and-salvage.html").

4. Empty meta description on the Dental Implants service page — one of the practice's highest-value service pages is missing the snippet that drives search-result click-through.

5. No discoverable YouTube channel, even though the practice already produces video content (currently hosted only on Vimeo), leaving YouTube's search and discovery value untapped.

6. "Book An Appointment" is a request form, not real-time online scheduling — patients submit preferred times and wait for a callback rather than confirming a slot instantly.

7. No live chat option on the website for visitors who want an immediate answer before calling.

8. Blog articles carry no visible publish dates, making it impossible for readers — or AI/search crawlers — to judge content freshness.

9. No dedicated local landing pages for nearby communities (e.g. Aurora, Lawrenceburg proper, West Harrison) beyond incidental mentions inside existing service-page copy.

10. Several images across the site (homepage and interior pages) carry empty alt attributes, a missed accessibility and image-SEO opportunity.

## Quick Wins — 30-Day Fixes

✦ Pick one city name (Greendale, IN matches the official GBP/Yelp listing) and standardize it across the website, Facebook, Instagram, X/Twitter, Nextdoor, and the PatientConnect365 listing, then update the "Meet Your New Dentist In Lawrenceburg" blog title/URL and the Dental Implants title tag to match.

✦ Fix the two broken links on the Dental Implants page — point "contact.html" to /connect-with-us and correct the relative "dental-implant-failure-and-salvage.html" link.

✦ Write a benefit-driven meta description for the Dental Implants page (currently blank) and tighten the generic Savings Program description, both surfaced directly during this crawl.

✦ Build a simple before-and-after gallery page and link it from the Advanced Smile Care and People Love It Here pages, since cosmetic transformations are already the site's central sales message.

✦ Create a YouTube channel and re-upload the existing Vimeo hero/team/technology videos to it, linking back to oylerdds.com in each description.

✦ Add visible publish/updated dates to the 17+ articles already live on the Articles page — no new content required, just a template change.

✦ Add short, descriptive alt text to the homepage and service-page images identified during this crawl as missing it.
